

## Hurricane Preparedness Guidelines.

This document is the hurricane/storm preparation procedure that Twin Shores Marina will follow during hurricane season. This document is not all-inclusive, but will provide a good minimum of items that can be useful during planning and preparation for a hurricane.

This hurricane plan is premised on the full cooperation of the slip renters. All marina tenants must have a current plan to secure or remove their vessel(s) during a hurricane. Our marina is not necessarily a safe location as we may be in the direct path of these storms. While not required, it is highly recommended that vessels be relocated well in advance to safer locations in order to protect both the vessel and the marina.

### Tenant Hurricane Planning Guidelines

- Vessel under 35' will have no less than 6, excellent condition. ½" lines.
- Prior to, or during a hurricane watch or warning, you may be asked to relocate your vessel.
- All vessels must be kept 100% operational at all times including batteries, bilge pumps and connections
- If you are an absentee owner, you must have a local agent who has the authority and responsibility for securing or re-securing, and salvaging a vessel
- If significant surge is expected, utility service to docks will be shut down.
- All loose items and all dinghies, canvas, sails, cushions, outboard motors, ladders, grills, hoses, chairs, plants and other items not secured to the boat must be properly removed or stowed.
- Keep battery-operated radios or alternatives in case of power outages or shut-off.
- Keep fuel and water tanks full.
- Remove all valuable electronics.
- Install additional buffering to your vessel.
- Make sure you have documented all your possessions either in writing, photography or video.
- Make sure insurance documents are stored in a safe area.

### Marina Guidelines.

The sole responsibilities are limited to good precautionary practices, including:

- Monitoring the status of your vessel before a storm.
- Removing or storing all gear on the exterior of the vessel.
- Relocating your vessel within the marina if needed.
- Shut off utilities if deemed necessary.
- Remove thrusters and store in maintenance building.
